PROFESSIONAL EXPERIENCE

Air Liquide

Katy, TX

Data Analyst

June 2024 – November 2025

- Designed Python and Pandas-based ETL workflows, integrating AutoCAD scripts and spreadsheets to extract and classify metadata from 30,000+ engineering drawings for project and engineering teams.
- Performed dataset annotation, tuning of model parameters (batch size, image size, epochs), and optimization of extraction logic, resulting in a 15% mAP improvement prior to department-wide deployment.
- Enhanced the workflow into a two-stage automated pipeline by incorporating OCR (PaddleOCR) and object detection (YOLOv8) to process 50,000+ complex cases, reducing manual effort and improving accuracy.
- Packaged and deployed trained model, data extraction and data validation as a Windows app for non-technical colleagues.
- Created KPI-driven dashboards to track project progress, processing throughput, and data quality metrics, providing visibility to engineering leads and supporting operational decision-making..

Exxon Mobil

Lagos, NGA

Data Analyst

September 2022 – February 2024

- Built an end to end data gathering and analysis pipeline in Python using BeautifulSoup to collect, clean, and transform live election suffrage data, which was integrated into Tableau dashboards for real-time insights.
- Presented analytical findings and dashboard insights to team leads, supporting faster interpretation of trends and informed decision-making.
- Designed and deployed interactive Tableau dashboards that visualized key trends, enabling colleagues to track election project data quickly and accurately.

PROJECTS & OUTSIDE EXPERIENCE

Distributed Data Processing Pipeline — Google Cloud Dataflow & Apache Beam Project

- Built a scalable data pipeline using Apache Beam and Google Cloud Dataflow to ingest, transform, and process large datasets from Google Cloud Storage, deploying the pipeline to run in a fully managed distributed environment
- Implemented monitoring, logging, and resource tuning on GCP, and produced architectural documentation outlining Dataflow jobs, GCS buckets, VM configurations, and end-to-end workflow behavior.

Insurance Premium Forecasting & Classification – Machine Learning Project

- Built end-to-end ML pipelines (Logistic Regression, Random Forest, XGBoost) for premium classification, performing EDA, feature engineering, data balancing, and model tuning (GridSearchCV), and deployed the best-performing model in a Streamlit app for interactive premium prediction.

EDUCATION

Indiana University

Bloomington, IN

M.S. Data Science

August 2024 – Present

- Relevant Courses:** Applied Machine Learning, Statistics, Engineering Cloud Computing, Advanced Database Concepts, Big Data Management, Social Media Mining.

University of Lagos

Lagos, NGA

B.S. Mechanical Engineering

June 2016 – October 2021

ACTIVITIES & LEADERSHIP

Mechanical Engineering Student Association (MESA)

Lagos, NGA

Public Relations Officer

January 2019 – December 2020

Nigerian Society of Engineers (NSE)

Lagos, NGA

Member

January 2020 – Present

SKILLS, INTERESTS & CERTIFICATIONS

Skills: Python (Pandas, NumPy, Scikit-learn, Tensor Flow, PyTorch, Statsmodels), SQL, Tableau dashboards, Power BI, Spreadsheets, EDA, A/B Testing, Git, AWS/GCP (GCS, Dataflow) Suite, Jupyter Notebook, BigQuery, Snowflake, Retrieval Augmented Generation (RAG).

Interests: Predictive Modeling, Regression/GLM Analysis, Statistical Analysis, Classification, Boosting, Feature Engineering, Model Evaluation (ROC/AUC, Cross Validation), Data Migration, Data Validation, Data-driven decision making, Forecasting, Hypothesis Testing, Computer Vision, Sentiment Analysis, Building GenAI Solutions.

Certifications: [Google Advanced Data Analytics Certificate](#), [IBM Data Analyst Professional Certificate](#)
